Sweden

Front-end Developer position

I would like to apply for web developer position as advertised on linkedIn or any other position that can suit my competencies at Soltia AB. I believe my competencies as a developer in both frontend and backend development, together with my drive to learn and love for technology will be a great benefit for Soltis's growth. This will also avail me the opportunity to use my learned skills and gained work experience to benefit the delivery of ongoing projects.

My past placement as a trainee with Telia Norge AS Identity team, motivated my interest in technology services and motivated me to study software development further. My UX/UI design and research skills will also be an advantage. Have experience of working in an Agile environment and studied Agile scrum methodology as part of my studies at Noroff Universitet which I have shared my knowledge by leading a training or retrospective meetings with the tech team I worked with as a trainee. Had an opportunity to also use my skills in data analysis to map the customer care process for both the B2C and part of the B2B customer care processes. This experience together with learned IT skills have made me determined to try and learn new technology, to use it for problem solving and achieve better user experience results. At NST AS I designed roadmap graphs to define operational processes to help solve a business problem and produced reports for management to make decisions. I also was part of the senior team to choose a new cloud based ERP sytem to be implemented. From August 2020 i worked part-time as a project manager for a transport company and also did IT consultation for startups in Norway and Botswana.

Currently I am on the final year of completing my full stack software development training to complete this April 2021 at Code Institute and toward the end of November at Noroff Universitet. Worked on both design, software development and data analysis projects which covers development processes and principles. I can speak enough Norwegian language and am fluent in English.

Aside my academic and professional experience, I am socially engaged and like outdoor adventures like going for mountain tours, skiing and travelling.

I have enclosed my CV with this application and my github account on the CV to show both my professional and academic background. This should further demonstrate my suitability for this position and my motivation to grow professionally in the technology industry. I look forward to your favourable response.

Yours Faithfully,

Kay Keatlaletse Alvær
